CHRISTOPHER BUCH MADSEN

ABOUT ME

I am 27 years old and originally from Denmark, but I've now lived in the Netherlands for over 5 years. I am passionate about all things related to AI and I'm grateful it's the field I am in. I've almost completed a B.Sc in Artificial Intelligence at the University of Amsterdam, but still need to write my thesis in the winter of 2020. In my spare time I enjoy travelling, longboard dancing, exploring new places to drink coffee and eat, and gaming with my girlfriend.

SKILLS

- Python 3.X (Expert)
  Numpy, Pandas, Scikit-learn, Keras
- C (Intermediate)
- Git, Scrum/Agile

EXPERIENCE

Aug 2018 – Jan 2020 • Vacanceselect.com
Data Scientist (Part Time)
• A machine learning project had been bought from an external company to monitor and adjust advertisement costs on campsites across the web. It was in a very rough, unpolished state and didn't function as desired. Together with a co-worker (Data Analyst) we revised the entire system. We built a model selection for predicting bookings on campsites based on google analytics and inhouse booking system data.
• Built a real-time recommender system based on correlation between customers, for customers on the website looking for campsites.
• General RnD in chat bots and unsupervised learning for customer insight.

Reference • Technical Product Owner, Martijn van der Kroef • +31 6 10641588

EDUCATION

2016 - 2020 • University of Amsterdam
B.Sc in Artificial Intelligence
(Complete December 31st 2020)

Significant Courses

- Linear Algebra
- Probability Theory
- Calculus
- Natural Language Processing I and II
- Machine Learning I
- Reinforcement Learning I
- Computer Vision I
- Data Structures and Algorithms
- Computer Systems
- Propositional, Predicate and Modal Logics

Electives

- Modelling and Simulation
- Scientific Data Analysis
- Project Computational Science.

Projects

- *2nd Year Project*
  Worked in a team of 5 on a project from a Ph.D student at The Amsterdam Medical Center over 1 month. We took on the task of finding patterns in electrocardiograms (ECG) for prediction of abnormalities such as Atrial Fibrillation. We applied various processing techniques including Discrete Fourier Transform and Savitzky-Golay smoothing, and applied a Convolutional Neural Network. The project was a success and part of the team went on to work further with the Ph.D student to publish the project as a paper in a scientific journal.

- *Learning and Decision Making*
  Worked in a team of 5 for Birds.AI on a project using their dataset of solar panel images across the Netherlands. We applied various Computer Vision techniques to detect solar panels in a given image and applied a Convolutional Neural Network to detect defects/issues such as bird excrements. nature coverage, and broken tiles on the panels.

- *1st Year Project*
  In a team of 4 we applied a color recognition algorithm to a flying drone. The drone could count the amount of occurrences of a specific color object without duplicates while flying over an area. The premise was to create a system useful in crowd control situations. The intended purpose of the drone was to fly over a crowd and count black/yellow members of the Dutch police in an area and provide information on whether or not the area had sufficient control.
